PROFESSIONAL SUMMARY

Finance professional with **5+ years across financial controllership, FP&A, finance operations and data analytics**, including four years at Aon. Hands-on experience includes month-end close, variance analysis, reconciliations, employee expenses, accounts payable, P2P, budgeting, forecasting, management reporting and process improvement.

At Aon, I worked across PeopleSoft, Workday and Coupa as a business user and supported the India Workday rollout as an early representative. At Anujlindal.in, I built reporting and planning processes for a 20-25 person startup, partnering with department heads on budgets, forecasts, pricing, spending and performance analysis. I hold an **MSc in Financial Data Science from UCD Smurfit Business School** and am an **Associate of CPA Australia (ASA)**.

SKILLS

Analytics & Reporting	Management Reporting · Power BI · Advanced Excel · Power Query · Financial Modelling · Python (Pandas, Matplotlib) · SQL (working knowledge)
Stakeholders	CFO & Department-Head Communication · Cross-functional Collaboration · Employee Support · Process Improvement

PROFESSIONAL EXPERIENCE

Finance Controllership Analyst

Oct 2018 – May 2022

Aon (Fortune 500 · Global Professional Services) | Gurugram, India

Progressed from Financial Associate to Finance Controllership Analyst over four years, supporting Aon India's month-end close, accounts payable, employee expenses, P2P controls, reconciliations and financial reporting. The role combined day-to-day finance operations, stakeholder support, process improvement and business-side ERP work across PeopleSoft, Workday and Coupa.

Financial Control & Finance Operations

- Performed monthly variance analysis and reconciliations across ~30 cost centres and 300+ vendor accounts, identifying coding errors, provision adjustments and expense reclassification requirements before close.
- Prepared reclassification journals and reconciliations 1-2 days ahead of close for inclusion in Aon India's entity financials, discussing and resolving month-end items directly with the India CFO.
- Managed employee reimbursement approvals, payment processing and related queries, working directly with employees and internal teams to resolve claim, coding and documentation issues.

ERP & P2P Systems

- PeopleSoft: approved employee reimbursement claims, uploaded Excel files, extracted reports and data, and supported Accounts Payable, Employee Expenses, Purchase Order and expense reclassification processes.
- Workday: supported the India rollout as an early business representative by documenting the existing PeopleSoft process, comparing workflows, testing reimbursement scenarios, training users and providing post-go-live support.
- Workday BAU: used Workday Expenses and Workday Financial Management to approve employee claims, process payments, extract and filter reports (including the internal Kahuna master report), analyse variances and reclassify expenses.

P2P, Process Improvement & Stakeholder Support

- Coupa: business user for purchase requisitions and purchase orders, PO compliance, invoice review, two-way and three-way matching, vendor onboarding, approval workflows, payment-status checks and invoice discrepancy resolution.
- Built an automated Amex delinquency tracker that saved ~1.5 hours of manual work each day, and created a consolidated expense review file that improved first-pass accuracy by 7% in its first quarter.
- Authored the Aon India Employee Reimbursement Job Aid, trained new users and led a claims town hall for employees of the newly acquired CoCubes business. The guide reduced finance workload by ~10% at year-end and routine reimbursement rejections by ~50%, and became onboarding material for new AON hires.

Head of Analytics

May 2022 – Jun 2023

AnujJindal.in | Delhi, India

Joined a 20-25 person education startup and built its data and analytics function, while supporting budgeting, forecasting and commercial decision-making across Sales, Finance, Content, YouTube and HR.

- Established a network of 5 contributors across 5 teams, defining what each function needed to capture and training contributors to turn raw data into usable reporting.
- Prepared budgets and rolling forecasts, collected assumptions from department heads, analysed budget versus actuals, and recommended pricing and spending changes to department heads and senior management.
- Connected Finance, Sales and Content data to support promotion timing, pricing decisions and operational priorities across the business.
- Built financial dashboards tracking budget versus actuals, cost efficiency and revenue trends; the resulting pricing and budget decisions contributed to a 5.6% increase in company revenue.
- Built content and audience-performance dashboards, including student speed-and-accuracy benchmarking, contributing to ~103% growth in YouTube reach.

EDUCATION

MSc Financial Data Science | Grade: 2:1

2023 – 2024

UCD Smurfit Business School (University College Dublin) | Ireland

- **Key Modules:** Financial Analysis, Financial Econometrics, Machine Learning for Finance, Python for Financial Data Science, Derivative Securities, Banking in the Digital Age.
